<td>Classes into gmail calendar</td>
<td>KRESSETJ</td>
<td>Several members of the Student Technology Advisory Committee would like to investigate the feasibility of having a students' classes automatically populate into the calendar in gmail. They feel this would be good publicity for IT, encourage students to use the Miami calendaring system more and assist faculty and staff in scheduling time with students.</td>

<td></td>
<td>Create Student Organization Funding Application</td>
<td>KRESSETJ</td>
<td>The current application used by ASG to track student organization funding was developed by a company located in Tennessee. The application is hosted offsite, does not use LDAP to authenticate users and does not interface with the other student organization applications or Banner. ASG is requesting that the student organization funding application be incorporated into the new Student Organization Portal and that it be redesigned and developed in-house in order to better meet the needs of ASG.</td>

Currently, when a student organization plans an event, a member of that organization must obtain written approvals to use an on-campus or off-campus facility. Events taking place off-campus only require an approval from an advisor or member of the Student Activities staff, while on-campus events require approval from the facilities administrator (e.g. Rec Center, Shriver, etc.), campus police, and possibly others. Obtaining the proper approvals is a very time consuming process, requiring students to physically carry requests to different approvers across campus and often results in delaying event planning. In order to streamline the approval process, the Student Activities and Leadership office and Associated Student Government (ASG) are requesting that an electronic workflow process be developed. Once events are finalized, the University Calendar should also be systematically updated.

The Banner Student module does not have a table to hold Leadership Codes for student activities or to mass add student activities into the student tables in Banner. The Leadership code is only available after the students have been moved as Alumni.

Currently the TRAIN system is used to schedule various workshops and training sessions for the Office of Learning Assistance. In order for this to be a completely effective solution they need to be able to produce attendance reports and have an online evaluation/feedback mechanism. Currently the system allows you to manually go in and mark attendance, but you can do nothing but print that page for the individual session.

Bernie currently has capability to email instructors. Need to enhance capabilities to allow emails to be sent to tutors, SI Leaders, and registered students (clients). Also system needs to be able to generate automatic email to tutor and client when an appointment has cancelled.
An online Academic Evaluation system was developed for the Rinella Learning Center to enable them to send academic evaluations to professors of student athletes and students in the Scholastic Enhancement Program. The system was designed on the premise that evaluations would be sent to all students in both groups twice per semester. At that time, only the two groups of students were identified as needing to receive the evaluations. Since then, the Rinella Center has recognized that not all the students in each group need to receive the evaluations twice a year. Even though the system allows them to select a subset of a particular group, the process is time consuming. In addition, the staff would like to send reminders to those professors who haven’t completed their evaluations and to have a thank you email sent to the professors who have completed their evaluations. The Rinella Center is being asked by the Student Affairs administration to work with students differently in order to increase student retention. As a result, the Rinella Center would like to accommodate this request by expanding the number of groups that can be selected to receive academic evaluations.

Office of Career Services Req-0534

Modify Career Services Symplicity Report

Cathy Metcalfe and Craig Patrick

The Symplicity report is in MlnE. Career Services needs a “minor(s)” field added to the report’s output.
